Chief, COAPS

MAR 1950

Assistant Director, III

Failure of JARIC to Receive CR Information Having Positive Intelligence Value

REFERENCES: 6. COAPS Memorandum, dated 27 February 1950, Subject as Above

h. Memorandum to AD/OSO from D/CI, Subject, Reports, OSO dated 25 January 1969.

- 1. This Office heartily concurs in the principle that the free flow of subject information is vital to the Central Intelligence Agency. While the instant case would appear to be of special interest solely to the Office of Scientific Intelligence and JAERC, it is also of concern to this office.
- 2. It should be noted, however, that not all reports having positive intelligence value, available to 080, from FBI, and other sources, are transmitted by 080 to ORS. Proquently ORE is apprised of the existence of such reports only when they are "misrouted" to ORE by accident. It is an accurate statement of fact that the intent and the letter of the directive cited as reference b is not effectively carried out by 080 to the natisfaction of this office. Off files contain memorous evidences of difficulties between ORS and 060 attendent upon this problem.
- 3. In view of the feregoing, and while this office concurs in Tab C of reference a, it is believed that further action is necessary to establish an equivalent "free flow" of subject information from OSO to ORS and OSI.
- b. It is therefore requested that in addition to formarding Tab C of reference a, that a new directive be issued by the D/CI to AD/OSO which, in addition to containing the substance of reference b instructs 050 to establish procedures mutually acceptable to ORE and OSI which will effectively implement the terms of the directive.
- 5. Accordingly, this office further requests that Tab B of reference A be restitten in the light of the foregoing, and that a Tab D be added containing a new directive to 050 as described in paragraph is above.
